Profile

Hi, I'm Saravanakumar KS, an AI / ML engineer with hands-on experience building intelligent solutions in the healthcare, sports and travel domains. Skilled in NLP, computer vision, and full-stack development, with expertise in TensorFlow, PyTorch, and model deployment. Passionate about applying AI to solve real-world problems and actively involved in research and competitions to stay ahead in the field

Key Highlights

- Finalist - HappyFox Hackathon, Built Solution for Enhancing Campus Life
- Finalist - HackMaggedon Hackathon, Developed App for Identifying Counterfeit Drugs.
- Finalist - Codolympics (Competitive Programming Contest) conducted by SSN College of Engineering
- Winner - Smart India Internal Hackathon , Built App for Assisting Farmer
- Solved over 200 DSA problems across Leetcode,GeekForGeeks,CodeForces

Education

Rajalakshmi Engineering College, Bachelor of
Technology in Artificial Intelligence Machine Learning

Nov 2022 – May 2026

- GPA: 8.5/10.0
- **Coursework:** Machine Learning, Deep Learning, Design and Analysis of Algorithm, Natural Language Processing

Experience

Machine Learning Intern, F22 Labs – Royapettah, Chennai

Jan 2025 – May 2025

- I was involved in the entire pipeline—from data collection and preprocessing to building models using scikit-learn and TensorFlow.
- I also got exposure to integrating models into functional prototypes, which helped me understand both the research and product side of ML development.

Senior Data Science Associate, IEEE CIS REC, Chennai

Oct 2024 – Sep 2025

- Organized and conducted workshops, roadmap sessions, and hands-on activities for freshers.
- Reviewed applications and helped recruit candidates with backend and data science expertise.

Junior Mentor, REC, Chennai

Jan. 2025 - March 2025

- Mentored my First Year Juniors in C Programming Language by helping them in various concepts such as Pointers, Structure, Union.
- Helped them with Hands-On session and reviewed their test scores .

AI Intern, Kenesis Labs - Anna University, Chennai

July. 2025 - Nov 2025

- Developed VC (Venture Capitalist) Recommendation Engine for assessing the startup ideas
- Worked over huge amount of startup ideas and developed algorithms to evaluate them by comparing it with AI agents.

Projects

Deep-Fake Detection, International AI Competition

Jan 2025 - Feb 2025

- Developed and evaluated deepfake detection models capable of distinguishing real and AI-generated faces in real-world conditions.
- Tools Used: Vision Transformer, EfficientNet50.

OutFitSense, Fashion Recommendation System

Feb 2025 - May 2025

- Used Deep Learning Techniques for personalized fashion recommendation and attire matching system
- Tools Used: Python, Inception, Myntra Dataset

WanderBuddy

Feb 2024 - June 2024

- Built AI-Assisted Itinerary Travel Planner with customized recommendation choices for exploring the world
- Tools Used: Python,React,JS,HTML,CSS

Campus Life 2.0,HappyFox Hackathon

Feb 2025 - March 2024

- Designed and Built optimized Time-Table schedule and allowed for resource sharing among students
- Tools Used: Python,Flutter,Gradio

Fake Medicine,HackMaggedon Hackathon

Aug 2024 - Sept 2024

- Developed Mobile Application for identifying counterfeit drugs and worked over 10000 variety of medicines for labelling
- Tools Used: Python,Flutter,Zxing

Virtual - Try On

Jul 2025 - Nov 2025

- Developed Virtual Try on model by having a reference from CAT - VTON Model by fine tuning its params
- Tools Used: Python , PyTorch

Technologies

Languages: C++, C, Java, Python, SQL, MongoDB

Technologies: Generative AI,Tensorflow,RAG

Certifications

Coursera-Python for AI Development, **NPTEL**- Cloud Computing, **Coursera**-Fundamentals Of Machine Learning, **NPTEL**-Affective Computing, **Kaggle Competition**-Regression
